Full Custom Pro

This collection is using dye-sublimation technology with full colour artwork. Also referred to as digital sublimation, where our designers can design the entire garment created from scratch. The end result from the sublimation process is a permanent, high resolution, full colour print. This technology guarantees that prints will not crack, fade or peel from the fabric under any condition. You can get some highly effective patterns and great effects using this technique.

Semi Custom Pro

This collection is based on using a Cut ‘n’ Sew panel to enable dye-sublimation technology printing which is using full colour artwork, combined with a choice of black and navy bulk dye fabrics. This style is prevalent to ensure a consistent look is achieved across any Full Custom PRO garment.

Semi Custom +

This collection is ideal for those looking to keep costs down, but wanting to look and

feel great at the same time. Offering 30+ bulk dye fabric colours and 3 types of logo embellishments including embroidery, screen print or digital heat transfer - this is the ideal problem solver for any situation.

Embroidery

Is ideal for stitching logos onto thicker fabrics.

Screen Printing

is a printing technique whereby a blade or squeegee is moved across a mesh screen onto fabrics. One colour is printed at a time, so several screens can be used to produce a multicoloured image or design.

Heat Press

Is a machine engineered to imprint a design or graphic directly onto fabric, with the application of heat and pressure for a preset period of time.

[Fabric Tech

Pique & 3D Coolmesh

Containing multifilament yarns will keep your skin hygienically fresh, comfortable, cool, dry and light in any environment through an industry-leading capillary action.

Polycotton

Using a Poly Cotton blend fibre, you get the best of both worlds. You get cotton’s superior soft natural fibre combined with polyester’s stronger more durable fibre. Our percentage of cotton versus polyester is 80% cotton and 20% polyester.

Woven

Constructed using woven elastane technology to ensure the fabric stretches with your body for a natural range of motion. The high filament performance polyester remains soft against your skin, lightweight, breathable and is fitted with sweat-wicking fabric technology to keep you dry, comfortable and moving freely.

3D Thermal Knit

Engineered using a 3D knit technology that delivers thermo regulation for optimal comfort. Pieced together using high filament performance polyester mixed together with an elastane blend for that perfect fit.

Quick-Dri

Treated with permanent antibacterial which is embedded into the yarn for the life of the garment preventing bacteria proliferation ensuring you remain odour free at all times. Protected with SPF 50+, means you can feel safe every time you’re in the Australian sun.

French Terry

Utilising knitted fabric technology that features loops and soft piles of yarn on the inside of the garment. This super soft fabric is designed to keep you cool, dry and comfortable, fitted with moisture-wicking breathable properties that draws sweat away from your body, and provides the perfect stretch and flexibility during any activity.

Membrane

New generation material that can provide maximum comfort in the most adverse conditions. Intelligent multilayer membrane lets sweat pass through easily, removing excess moisture that guarantees extreme comfort. Treated with water repellent coating as well as having waterproof membrane bonded to the outer fabric shields you from the elements whenever the weather turns bad.

Polar Fleece

New, light and strong pile fabric mimics, and in some ways surpasses, wool. A lightweight, warm and soft fabric, fleece retains much of its insulating quality even when wet. It is a good alternative to wool for those who are allergic or sensitive to wool.

Lycra®

Introducing a “green”, bi-elastic techno-Italian fabric from Econyl® ensures a perfect fit that guarantees extreme elasticity power even after many washes. The high percentage of LYCRA® XTRA LIFE™ ensures the perfect fit that remodels your silhouette. EVOFIT Compression® is 30 grams lighter and 15% more powerful than anything on the market guaranteeing extreme elasticity power.

Full Custom Pro

Racerback Singlet

Optimise your impact by creating a one of a kind custom design through sublimation printing, this process has many benefits that allows you total freedom when customising your garment. Keep cool on the go using Our trademark high filament Quick-Dri fabric to deliver exceptional mobility and lightweight performance.

Sizing Guide

How To Measure

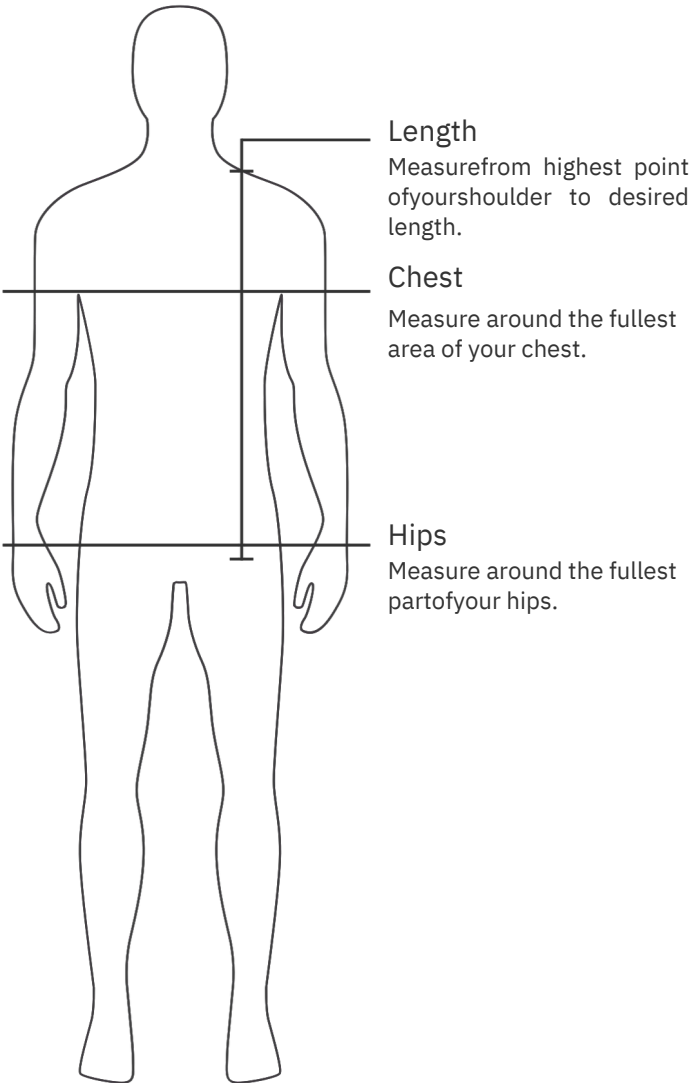

To measure your clothing size, please follow these simple measurements:

– When using a measuring tape and your chest measurements fall in a particular size, how tight the measuring tape is around the chest is how tight the garment is going to be on the body.

– If you like a form-fitted garment that tightly follows the contours of the body, select the size column you fall in. However, we would suggest if you prefer a more relaxed garment, go for a size or two larger.
